The neutral $a = 1$ endpoint is finite ($\mu_B = 1200$ MeV, $T = 0$)
a=1 at 669.01 MeV
net density ratio 1:2:0
a=1 at 344.13 MeV
strange quarks remain
Neutral, nonnegative net densities
$\mu_Q = 0$
$a = n_K/n_B$
$\mu_K = \mu_d - \mu_s$ [MeV]
