Cold-interface profile comparison: ideal energy conservation versus thermal conduction

$T_N = 10$ MeV, $n_{B,N} = 3n_0$, $B^{1/4} = 180$ MeV

ideal energy-conserving $n_K$ — thermal conducting

$a = n_K/n_B$

$u$ [m s$^{-1}$]

$T$ [MeV]

$\mu_B$ [MeV]

$n_B/n_0$

$P$ [MeV fm$^{-3}$]

$\mu_K$ [MeV]

$\mu_K$ not defined in PNM

$n_K/n_0$

$x$ [nm]
