Equilibrated downstream endpoint test at $T_N = 20\,\mathrm{MeV}$
$m = 0.030$
$m = 0.100$
No finite-u root for $m = 0.030$
$\min\Delta h_{\mathrm{iso}} = +2.08\,\mathrm{MeV}$
Unique endpoint for $m = 0.100$
$T_Q = 8.25\,\mathrm{MeV}$
$\mu_{B,Q} = 1184.45\,\mathrm{MeV}$
$A = 0.139$
$\Delta(h/n_B)_{\mathrm{iso}} \equiv h(0^+)/n_B(0^+) - h(0^-)/n_B(0^-)$ [MeV]
