Equilibrated downstream endpoint test at $T_N = 20\,\mathrm{MeV}$
$m = 0.030$
$m = 0.100$
No finite-$u$ root for $m = 0.030$
$\min\Delta h_{\mathrm{iso}} = +2.08\,\mathrm{MeV}$
Unique endpoint for $m = 0.100$
$T_Q = 8.25\,\mathrm{MeV}$
$\mu_{B,Q} = 1184.45\,\mathrm{MeV}$
$\Delta h_{\mathrm{iso}} = h_Q/n_{B,Q} - h_N/n_{B,N}$ [MeV]
$T_Q$ on $P_Q = P_N$, $\mu_K = 0$ [MeV]
